

Get FIT Ready

with support from

Let us assist your Utility in meeting the requirements under Ontario's new Feed-In-Tariff program. Here's Why:

Utilities Leverage Our Experience - We have been involved with the most complex, greenfield, generation projects. These include Grid Connected Generators, Large & Small Embedded Generators and connections under the OPA's Standard Offer Program.

Free Up Your Resources - Our knowledgeable staff acts as an extension of the Utility to provide advice and direction to Utility customers seeking information related to generation connection, metering, settlement, program and regulatory requirements including:

Customer Care Centre

- Redirect phone and e-mail inquiries to Rodan's knowledgeable customer service team
- Design and maintenance of a utility branded website offering up-to-date program information
- Managing incoming applications

Power Systems & Engineering

- Engineering services and design changes required on the distribution system and network facilities including: modifications to switchyards, protection, telemetry, conductors and metering

Metering

- Design, engineering, fabrication, installation and commissioning services
- Communications
- Monitoring and trouble resolution

Project Development

- Consult with the generation proponents to review and discuss the generator plans
- Provide preliminary information on connection options
- Provide a guide to explain the connection process.

Connection Impact Assessments

- Prepare Connection Impact Assessments (CIA) to determine the feasibility of connecting the generation facility to the distribution system

Data Management & Settlement

- Data collection, storage, management and settlement
- Access to our web-based presentation software and the host system
- IESO and customer billing

Helping Utilities with generation connection in 5 Easy Steps:

- 1** **Customer Care & Utility Branded Website**
Rodan's Customer Care Team will manage customer acquisition and incoming phone/email enquiries from proponents. Generation proponents will then be referred to the utility branded website for up to date program information and a generator qualification form.

- 2** **Generator Consultation & Application Management**
Consultation to discuss project specifics related to design build, metering and connection process. Completion and review of FIT application to ensure prerequisite information is complete and send submission to the OPA.

- 3** **Complete DAT & TAT Tests**
We will collaborate with the OPA & the Utility to complete the Distribution Availability Test and Transmission Availability Test in order to allow for the award of a FIT contract.

- 4** **Connection Impact Assessment, Construction, Distribution Connection & Metering**
Complete turn-key services.

- 5** **Commercial Operation**
Rodan will provide ongoing data collection, storage, settlement services and web based presentation.
