OPA SELECTS RODAN AS A PROVINCE-WIDE CONSERVATION AGGREGATION OPERATOR

Toronto, ON, Canada, February 1st, 2008 – Rodan Energy & Metering Solutions Inc. (Rodan) has been awarded a province-wide contract for the operation and maintenance of a program to help Ontario's residential and small commercial customers reduce electricity consumption during periods of high demand.

The Ontario Power Authority (OPA) selected Rodan to work with local distribution companies to operate and manage multiple load control systems in support of Ontario's peaksaver® program. The peaksaver program allows local electricity utilities to install a mechanism in eligible homes and small businesses which permits the utility to briefly cycle down the central air conditioning and water heaters during critical peak-use periods – typically on weekday afternoons during the hottest days of the summer.

An aggregation operator provides the technical and operating capacity to efficiently “bring together” electricity users who want to reduce their power use.

“As a leading provider of demand response solutions, Rodan is pleased to leverage its world-class Network Operation Centre to support the OPA and Ontario's LDCs by operating a reliable multi-system DR platform,” said Paul Grod, Rodan's President. “Under our enerShift™ brand, Rodan is delivering a full suite of demand response and energy management solutions to each major consumer segment in Ontario.”

“One of the OPA's important mandates is capacity building in the conservation sector,” said Paul Shervill, Vice President of Conservation and Sector Development. “Rodan is certainly a private sector leader in enabling these forward thinking solutions”

About Rodan

Rodan is a leading provider of metering and energy management solutions. Combining its expertise in metering, data management and demand response, Rodan is enhancing grid reliability and price responsiveness in Ontario's electricity sector.
